

# CSCI 1301 – Lab 12

September 20, 2018

## 1 Presentation

This lab is a review session where you should feel free to ask Bryana questions, and where you should make sure you are up-to-date in terms of labs and homeworks. To get the discussion started, you can have a look at

- A possible solution to the “Room” exercise from lab 10: Room project<sup>1</sup>
- The source code of the previous lecture, the Grade project<sup>2</sup>, with “corrected” setters.

I took care of writing detailed comments in the “Room” project: you should start taking that habits too of documenting your code, making it easier for everyone to read and understand it.
